Irinox CP ONE

Bakery and Pastry Refrigerated Holding Cabinet

CP ONE is the new Irinox Refrigerated Holding Cabinet, designed to help bakeries, ice creameries, pastry chefs and the like, preserve their creations in perfect condition, while safeguarding the quality of flavours, colours and taste. These cabinets work with both positive and negative temperatures, and with up to 3 humidity levels you are guaranteed no sudden temperature change, even if the door is opened frequently, ensuring maximum levels of quality preservation.

Three functions, one unique cabinet

Air Management System:

This innovative ventilation system keeps sudden temperature changes inside the cabinet to a minimum. It also provides perfect air circulation between the trays for ideal preservation of products, without them getting too dry or moist.

Sanigen (Optional)**:**

The patented Sanigen sanitising system keeps the entire holding cabinet purified, without bacterial contamination. With round the clock sanitisation, Sanigen guarantees fresh, healthy air and improves the shelf life of products. It also eliminates odours and blocks the exchange of fragrances between food products.

Humidity Management System:

The humidity control system has 3 different settings ranging from 50% to 90% and temperatures from 0°C to 15°C, allowing the preservation of any food type and guaranteeing maximum levels of customised preservation.

* Available as standard in two half solid doors (glass doors & single door options available on order)

Features & Benefits

- Humidity control; creates ideal humidity in the chamber
- Perfect air circulation
- Very fast temperature recovery, guaranteed constant temperature even with frequent door openings
- Sanigen; round the clock sanitisation
- Interior LED lighting; low temperature lighting providing clear view of products and raw materials
- Irinox balance system; comes with high performance cooler and perfectly balanced components to reduce sudden changes in temperature to a minimum
- Hot gas defrosting; prevents the formation of ice and thus preventing the failure of the holding cabinet
- Positive and negative temperatures; choose from temperatures ranging from -30°C to 15°C
- Customised; temperature and humidity levels can be set at any time
- HACCP capable controller
- Solid door is standard; available in glass on request
- Easy programming; new electronic system with easy-to-use display and controlling of all programs
- Flexible to suit requirements; has the capacity to hold up to 66 trays (600 x 400mm) or 54 tubs (360 x 165mm)
